

Our values and goals

Venturewavecapital is a private, legally registered online investment company with the goal of earning the greatest profit possible from Foreign exchange trading. If this sounds like your ideal situation, and if you are considering entering the online investment marketing, we strongly recommend giving us here at venturewavecapital.net a try; we are positive that you will be able to become a huge success in partnership with our company.

Investment Management

We serve high-net-worth individuals, and foundations, providing investment management services and offer investment products to achieve investment goals and financial well-being.

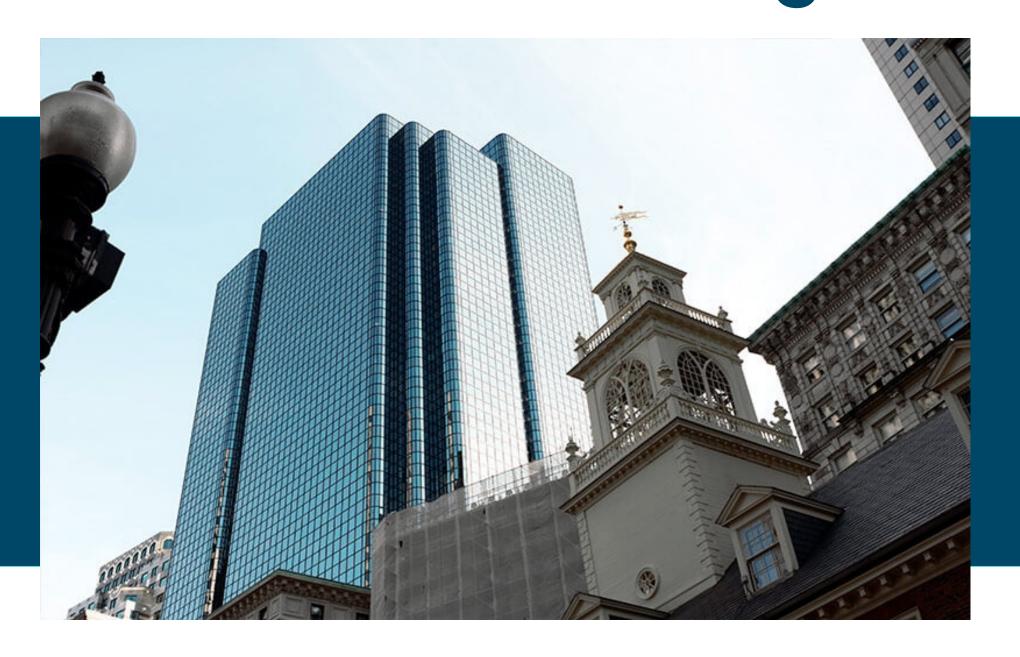

Investing and Lending

We provide a wide range of comprehensive financial services, designed to connect investors with high-potential projects and organizations that are actively seeking capital.

Transaction and Investment Banking

At venturewavecapital.net, we have been continuously transforming the traditional money management industry, in order to open the financial markets to everyone, everywhere.

Growth Driven

We precisely provide value in those areas that matter. We assist portfolio companies in developing and executing strategic growth, building the board and executive management team, exploring capitalization structures, pursuing growth mergers and acquisitions, and enhancing market presence.

OUR CORE VALUES

Our core values are our company's foundation. Our business strategy is designed based on our core values. Our core values work as guiding parameters to the way we function and represent who we are. Our relationship with our employees and our investors are based on our core values.

Integrity:

We practice honesty and build our relationship on it. We do business the right way. We assure the timely payout of the entitled profits and bonuses to our clients.

Be Accountable:

Protection of your assets, financial stability, protection against data theft and legal compliance has been primary concern of our company.

Teamwork:

We work together to make a difference. The company will always support the investors and always strive to bring forth team-leaders from regular investors.

Respect:

We respect the clients' unimpeded access to their account and make sure to keep the server and website protected. We appreciate you for selecting us as your investment partner.

Bitcoin Mining and Trading Economic Assets

To put it simply, trading is the buying and selling of financial assets. However, actually trading yourself isn't quite as straightforward.

There's a lot to learn and we want to make things as simple as possible for you. That's why we've created guides covering the most important things to know as a new trader. Don't worry, you'll find no overcomplicated jargon here. Just easy-to-understand explanations you'll get your head around in no time.

Basics of Bitcoin Mining

There are three ways to acquire Bitcoin:

- Purchase them on an exchange
- Receive them in exchange for goods and services
- Mine new Bitcoin

The process of discovering new Bitcoin is described as mining because it resembles the process of mining for any other resource. With gold mining, miners search and dig through the earth in hopes of striking gold.

Bitcoin Mining and Trading Economic Assets cont'd

With Bitcoin, miners attempt to find Bitcoin through solving complex mathematical problems. Blockchain is the technology that the cryptocurrency is built on. It is a ledger that is publicly distributed and records every Bitcoin transaction.

It is literally a digital chain of blocks. Each block contains a group of Bitcoin transaction information. Miners add to the blockchain by using computer processing power to solve complex mathematical problems. Solving the problems will result in the block being successfully added to the chain. The miner who correctly solves the problem is awarded Bitcoin.

The above forms the basis of the complex process of Bitcoin mining. It helps keep the payment network secure and trustworthy. The network is built on a peer-to-peer network, meaning that every single miner across the globe is contributing their computing power to maintain the network, confirm its transactions, and keep them secure.

How to start Oil Trading business in UAE?

https://venturewavecapital.net

Crude Oil Trading

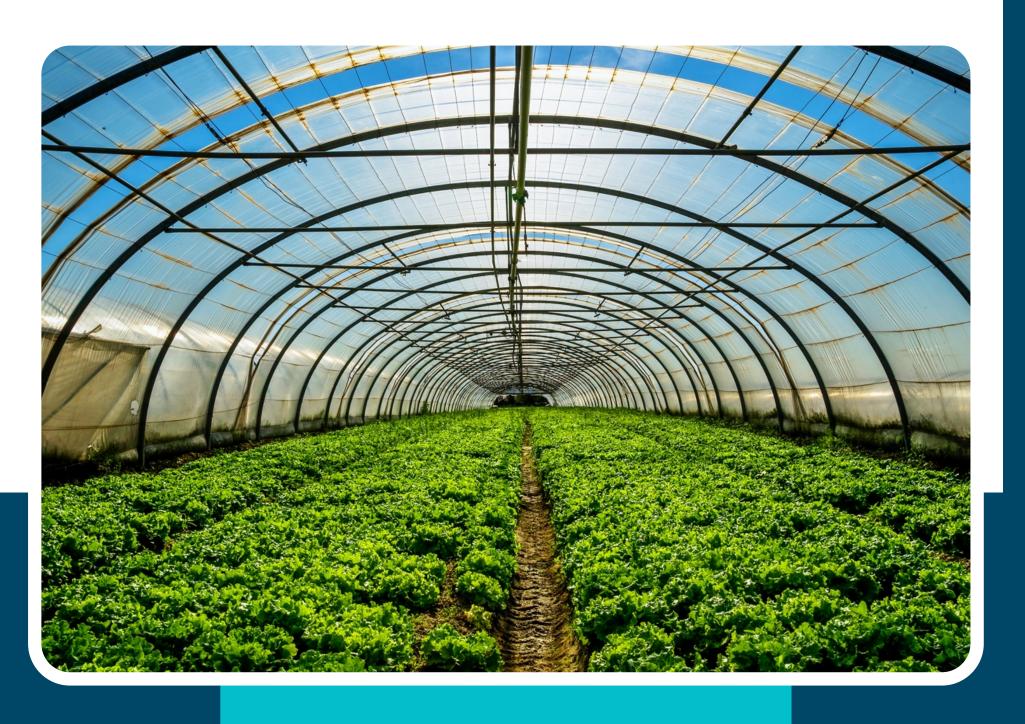

Crude oil trading offers excellent opportunities to profit in nearly all market conditions due to its unique standing within the world's economic and political systems. Also, energy sector volatility has risen sharply in recent years, ensuring strong trends that can produce consistent returns for short-term swing trades and long-term timing strategies.

Crude oil moves through perceptions of supply and demand, affected by worldwide output as well as global economic prosperity. Oversupply and shrinking demand encourage traders to sell crude oil markets, while rising demand and declining or flat production encourages traders to bid crude oil higher.

Professional traders and hedgers dominate the energy futures markets, with industry players taking positions to offset physical exposure while hedge funds speculate on long- and short-term direction. Retail traders and investors exert less influence here than in more emotional markets, like precious metals or high beta growth stocks.

Retail's influence rises when crude oil trends sharply, attracting capital from small players who are drawn into these markets by front-page headlines and table-pounding talking heads. The subsequent waves of greed and fear can intensify underlying trend momentum, contributing to historic climaxes and collapses that print exceptionally high volume.

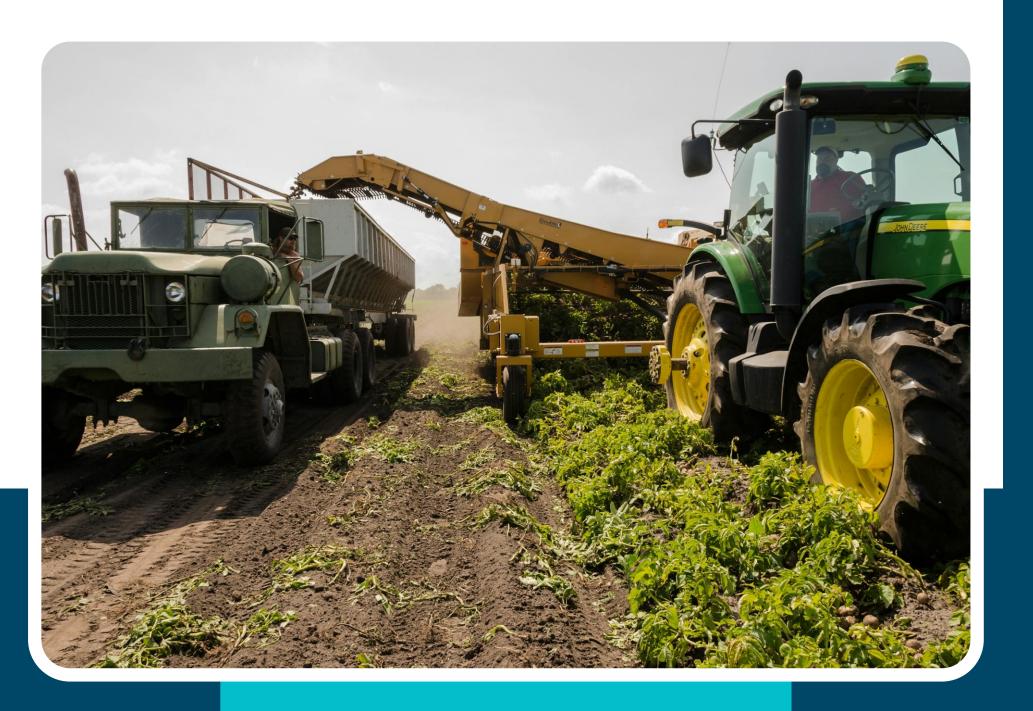

Agricultural Trades and Investment

Trade plays a crucial role in delivering food and clothing to consumers worldwide. It helps to provide greater choice in consumer goods, and has played a role in reducing food insecurity across the globe.

Over the past decade, international agricultural and food markets have witnessed a number of changes, which have brought domestic and international markets closer together. Since 2000, trade in agro-food products has grown strongly – more strongly than in the preceding decade at close to 8% in real terms annually between 2001 and 2014 compared to 2% between 1990 and 2000 – as world markets responded to a more rulesbased trading environment, falling tariffs, and reductions in trade-distorting producer support. Global agricultural production has also continued to increase, driven by rapid growth in a number of developing regions, in particular those of Asia and South America.

But agro-food trade isn't just increasing, it's becoming 'global'. The food and clothing that consumers find in their local stores are increasingly made from a wider range of products, produced in a wider range of locations across the globe.

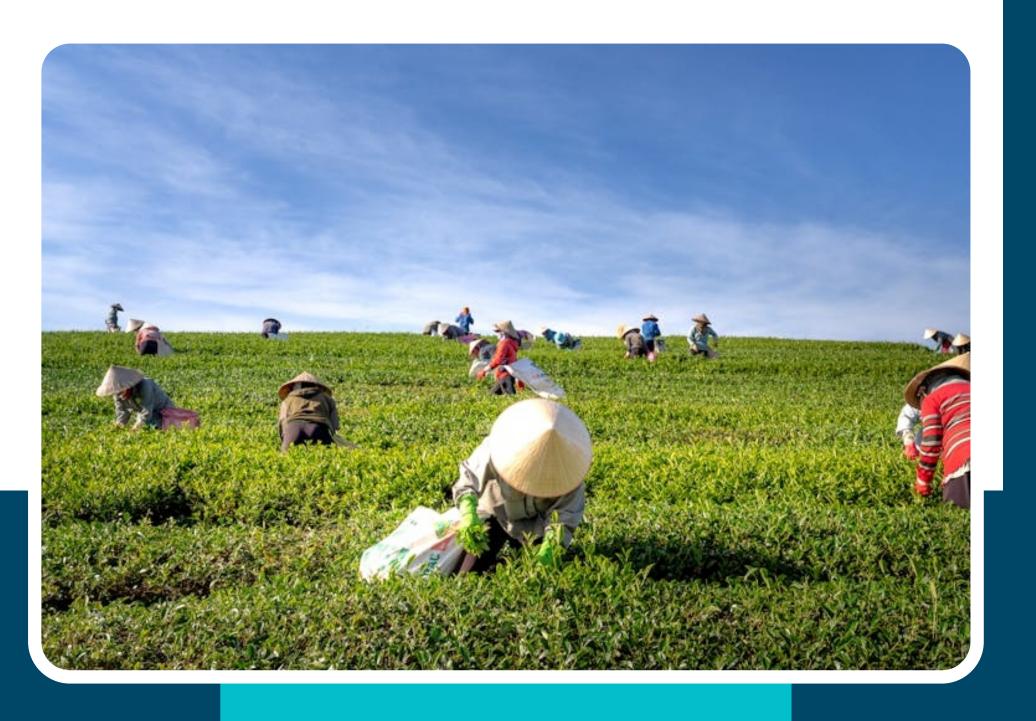

Agricultural Trades and Investment Cont'd

Among the changes seen in agro-food markets, there has been a significant increase in trade among emerging and developing countries, which are increasing in importance, both as suppliers and markets for agro-food products. Increasing trade has also been accompanied by deeper integration of the world's food system. A growing share of agro-food trade is taking place in global value chains (GVCs) – agricultural and food processing value chains that are spread over several countries – linking agro-food sectors and other sectors of the economy from across the world.

Trade and domestic support measures continue to constrain trade and further integration of agro-food markets

While international agro-food markets have evolved, most countries continue to provide support and impose barriers through measures that distort trade and limit the benefits that international agro-food markets can deliver for consumers.

Agricultural Trades and Investment Cont'd

These measures continue to have significant and negative effects on the welfare, resilience and food security of consumers and producers, as well as on agricultural sustainability, and also reduce agricultural and food trade volumes. And while an objective of many trade and domestic support policies is to increase food production, there is little evidence that they achieve this goal: global agricultural and food production would be higher if distorting support was removed.

New and closer linkages between agricultural and food sectors, and between these and other sectors of the economy, mean that the impacts of trade and domestic support measures are transmitted more widely. Globally, around 24% of agro-food export value comes from imported inputs: industrial inputs (machinery and fertiliser) and services, as well agriculture and food. Trade policies that act as barriers to imports directly reduce the competitiveness of a country's own agro-food exports by raising input costs. Other measures that affect the flow of agro-food products across borders can also reduce trade.

Agricultural Trades and Investment Cont'd

Non-tariff measures (NTMs) – those related to laws, regulations and requirements such as sanitary and phyto-sanitary measures (SPS), technical barriers to trade (TBT) and customs procedures – can increase trade costs. Since agro-food products in GVCs may cross borders multiple times before reaching final consumers, those trade costs can have significant ripple effects and are most problematic for smaller businesses. While NTMs are in place to achieve legitimate regulatory goals, they can restrict trade depending on how they are designed and enforced. The greatest benefits from reform come when everyone acts together

With regions and sectors becoming more globally connected, countries at all stages of development have a greater common interest in ensuring that international agro-food markets are free from distortions.

The gains from reform are greatest when all countries – developed and developing – act together to reduce trade-related and domestic support. Developed countries benefit from lower prices for their consumers and production shifts towards more efficient sectors.

Agricultural Trades and Investment Cont'd

For some countries, the gains largely come from reforming their own distorting policies. The welfare gains to developing countries are significantly larger when all countries reduce trade-related and domestic support. This is because the benefits from reform for developing countries are critically linked to the actions of other developing countries – reflecting the increase in 'south-south' trade.

As the distorting effects of tariffs and domestic support are reduced, the potentially trade-reducing effects of NTMs will become more apparent. The trade impacts of such measures can be reduced by removing unnecessary costs that may arise from poor design or implementation.

At the Venture Wave Capital, we analyse the impacts of trade and agricultural policies to assist countries in making informed policy decisions that will help make agro-food trade work for all. Countries' policies that restrict trade or unnecessarily increase trade costs harm their own domestic economies as well as their trading partners, by constraining the development of the agro-food sector.

H.E. Dr. Tariq Abdulqader is a distinguished business mogul, investor and CEO of Venture Wave Capital, with over 4 decades of experience spanning multiple industries, including real estate, technology, energy, and finance. Known for his exceptional ability to identify profitable investment opportunities, Dr. Abdulqader has achieved remarkable success, consistently delivering high returns across both traditional and emerging markets. Recently, he has focused on cryptocurrency, where his investments in Bitcoin, Ethereum, and select altcoins have proven highly successful, solidifying his position as a prominent figure in the crypto space. Dr. Abdulqader holds a doctorate in Business Administration and is a sought-after speaker on topics such as digital currencies and finance. His contributions to business and his philanthropic endeavors have earned him the title "H.E." (His Excellency). Given his background, Dr. Abdulqader is a leading figure in the UAE's investment community, where he plays an influential role in shaping market trends.

Do not compare yourself with anyone in this world... if you do so, you are really insulting yourself.

H.E. Dr. Tariq Abdulqader

Enterprise- insured under Insurance.

Progressively Daily Income

Your daily earnings depend solely on the size of your deposits, the number of which is unlimited. Each of your deposits has its own conditions for calculating profits and does not sum up with the rest.

Crypto Loan

Get a loan to grow your business from us; Eligible Investors can borrow up yo \$50,000 starting at 1% monthly. Must be an investor for more than 2months must be an investor of bitcoin less than \$15,000 T&C apply.

Maximum Protection

The company's website is under reliable protection by the leaders of the information security market: daily scanning and timely measures of virus prevention of the website and theft of users personal data.

For companies, brokers and individuals

Expand into mining and secure custody of digital assets, including all the main cryptocurrencies and DeFi tokens.

Instant Payments

When your balance reaches the minimum amount of 100 USD, you can use the function to make a withdrawal request. All requests are processed automatically, and money is instantly sent to the details you specify.

24/7 Support

You can get a full-fledged consultation and the necessary information by contacting any regional representative or customer support on the website through a feedback form in your account, email or online chat.

WEARE CERTIFIED

OF A
PRIVATE LIMITED COMPANY

Company Number 1146843

The Registrar of Companies for England and Wales, hereby certifies

VENTURE WAVE CAPITAL

is this day incorporated under the Companies Act 2006 as a private company, that the company is limited by shares, and the situation of its registered office is in England and Wales.

Given at the Companies House, Cardiff on 9th November 2015.

The above information was communicated by electronic means and authenticated by the Registrar of Companies under section 1115 of the Companies Act 2006

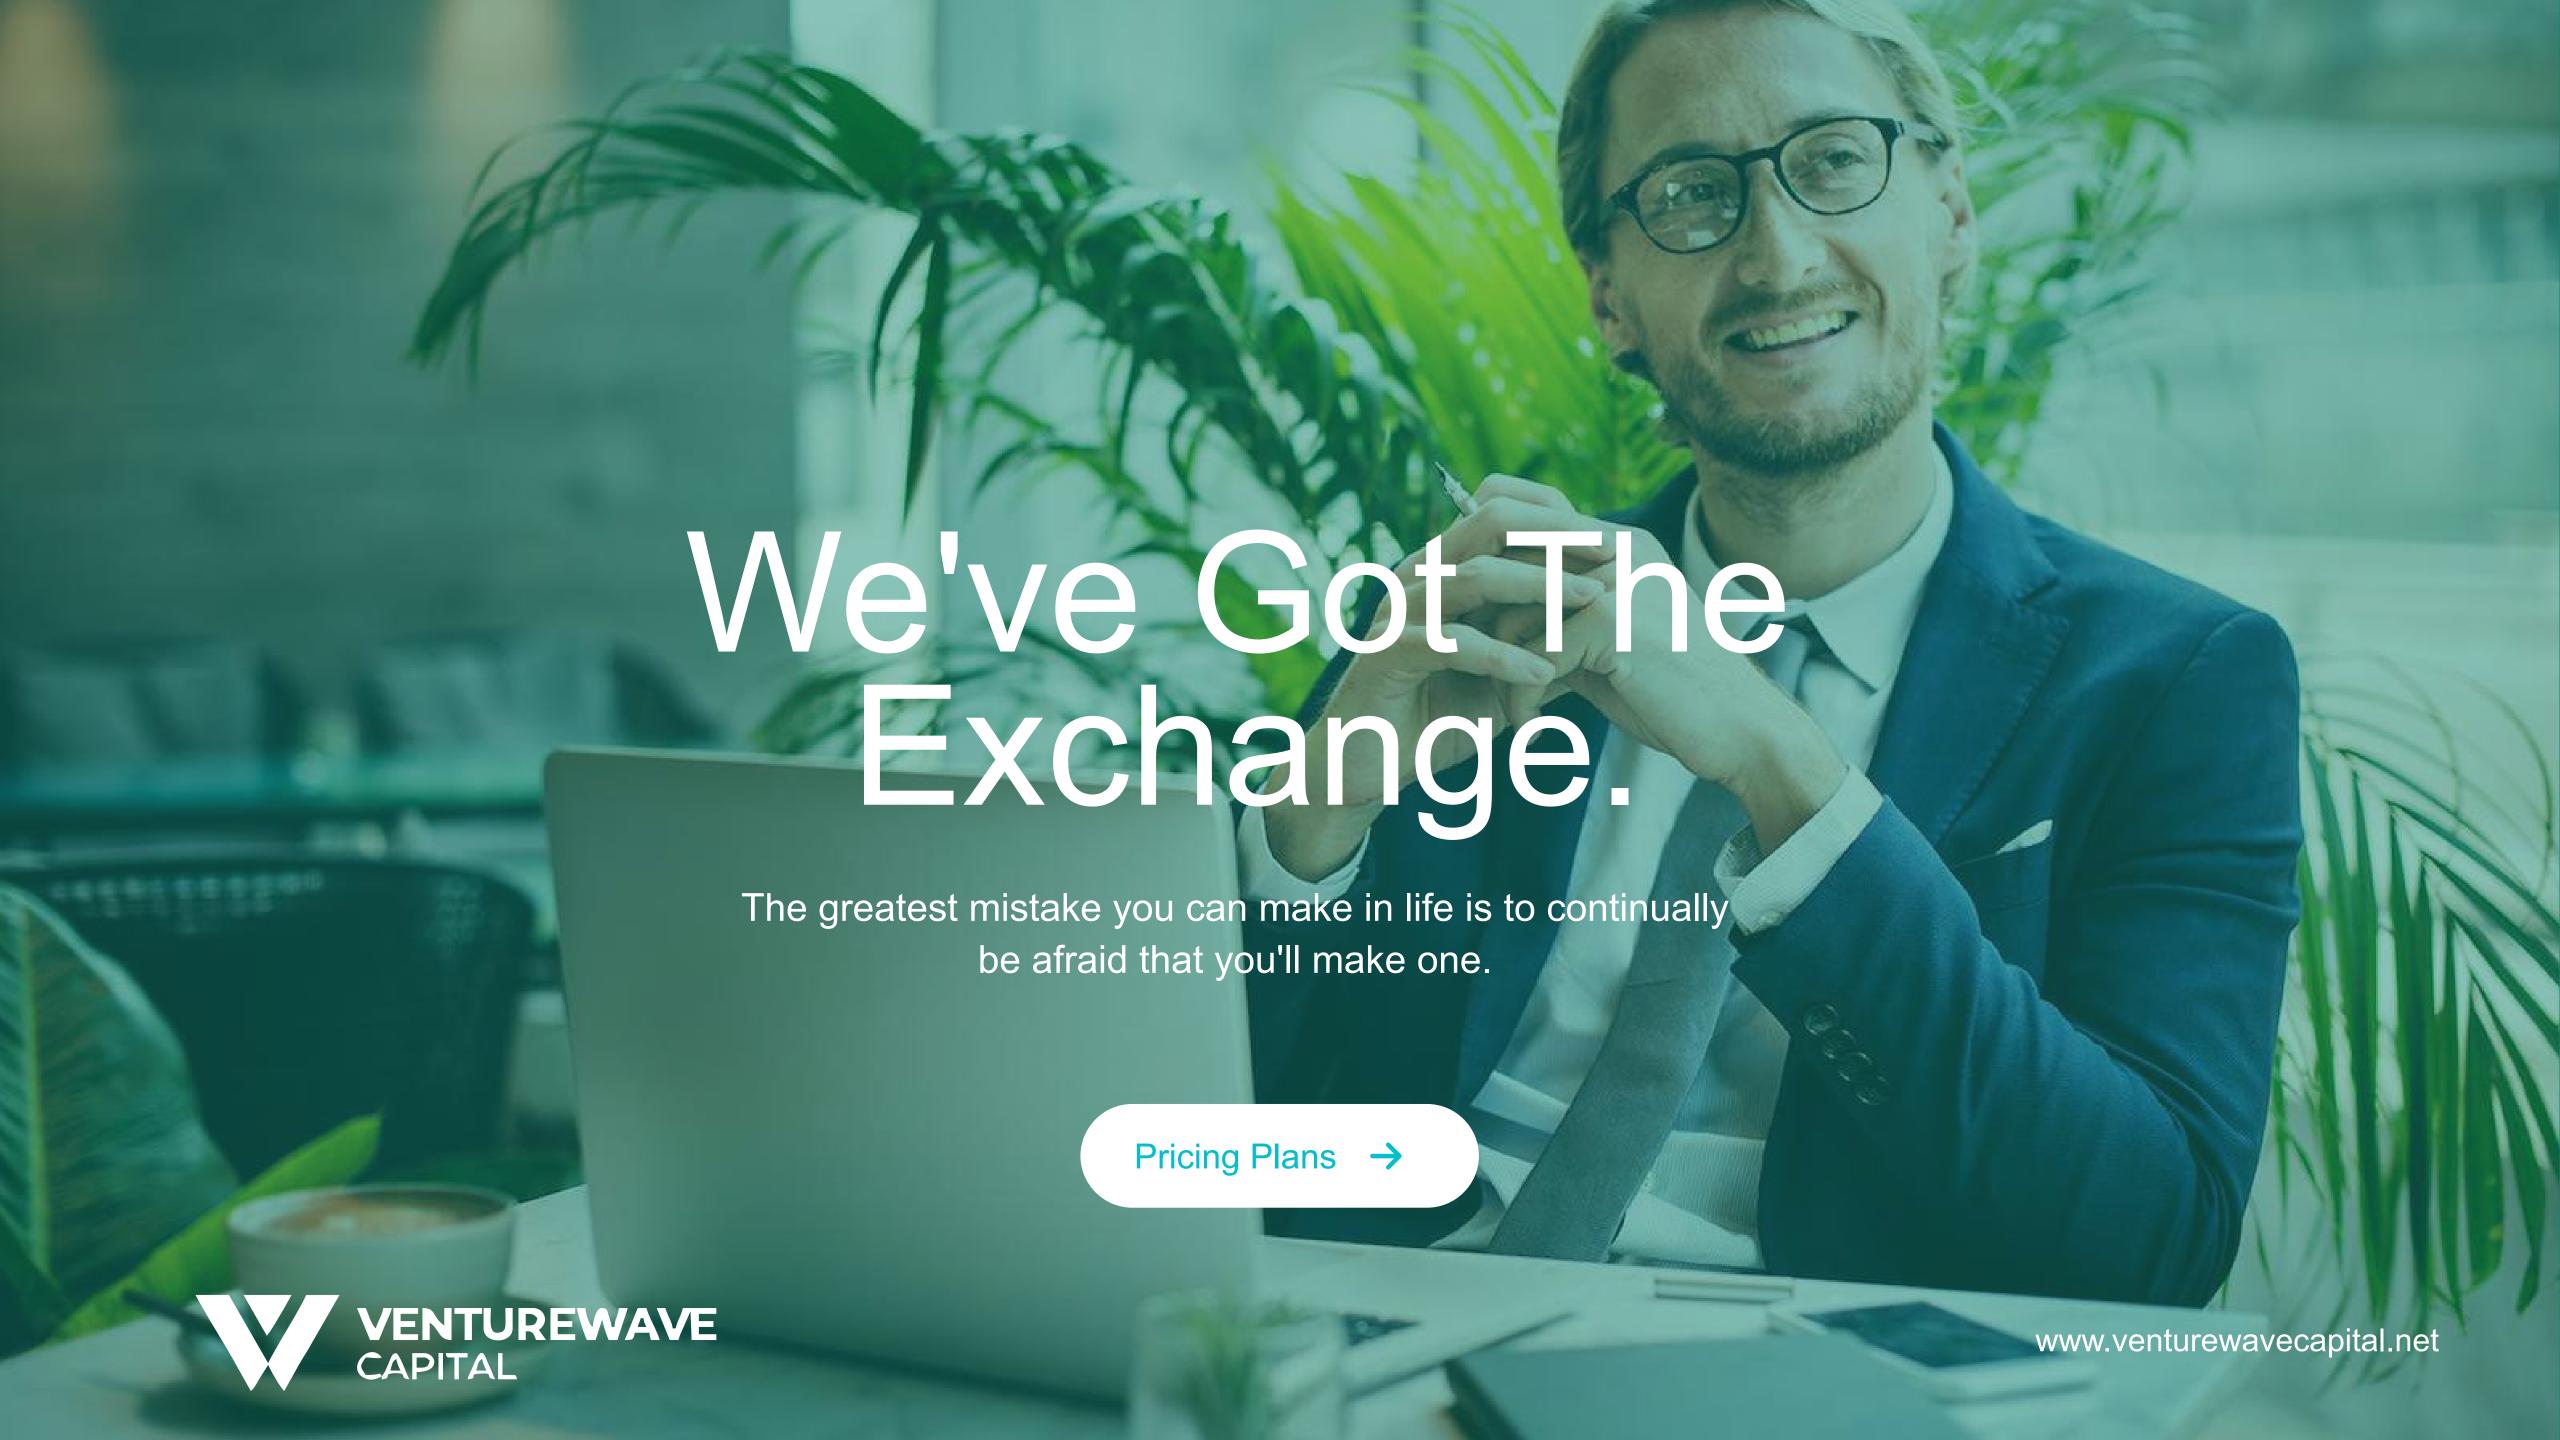

Our company is registered and incorporated under the Companies Act 2006 as a private company limited by shares.
